Abstract
This study discusses the internet which can be used to convey information quickly and widely through an online service that aims to determine the level of user assessments of the use of the Internet in support of academic activities and to obtain information difficulties or obstacles the use of internet in proses learning and teaching as well as the achievements of the increase in the number of students in education after using the internet at IAIN Kendari. The benefits of this research in order to sustain the intensity of management education in IAIN Kendari better, facilitate and expedite the learning activities in an effort to increase the productivity of education, and boosted achievement the number of students each year and can be used as one input to participate in providing facilities supporting the use of internet online services to support the academic activities in proses education. This type of research is mixed or mixed method research, data collection techniques used are questionnaires, interviews, observation and observation. This research is a field research (field research), the main source used is Kendari IAIN students who are still active in college and often use the internet, as well as other documents that support this research. The number of respondents of this study was 100 respondents to be sampled and analyzed using descriptive analysis. Interpretation of the data was based on the percentage of respondents. so the implementation of proses learning to use the internet in Kendari IAIN is needed. The review found that the use of the Internet is in the category very well and good for some applications services that are already online between 64%to 88%, providing an assessment quite 11% to 28%, and provide an assessment less category as much as 2% to 18%. Constraints in the implementation of the development of learning to use the internet in the classroom IAIN Kendari is the Internet network access and the signal is very weak so that the implementation is not optimal for the development of learning. Internet use in IAIN Kendari implications for the achievement in publishing information that shows the plan can be achieved can be evidenced by the number of college students who choose IAIN Kendari every year increasing numbers who obtained the information from the website IAIN Kendari.

Keywords: Utilization of the Internet, Academic Information Systems, IAIN Kendari

INTRODUCTION

The system is a network of procedures that are interconnected, gathered together to perform an activity or to accomplish a particular goal (Jogiyanto, 2005). Another author said the system is an entity or a unit consisting of two or more components or subsystems (smaller systems) are interconnected and linked to achieve a goal. Other authors mention that a system can be defined as a collection or set of elements, components, or variables that organized, interact with each other, depend on each other, and integrated (Sutabri, 2012).

According to John W.Satzingeret in his book "System Analysis & Design in Changging World 5th edition (2010)" explains that the system is a collection of related components that function together to get some results and information system is a collection of related components that

gather processing, storage, and produces as output the information needed to complete business work. Academic information system is the software used to present information and organize the administration associated with academic activities. Academic Information System is a system that works for process data related to the academic in an institution education. In general, the data is processed in an information system academic among others include student data, teacher of data, data subjects, and other data that is internal based on the needs of each institution education. With the use of software as in this study is expected academic administrative activities can be well managed and the necessary information can be obtained easily and quickly.

METHODOLOGY

This study used mixed methods study is a product that is pragmatic and combine qualitative and quantitative approaches in the different stages of the research process (Abbas, 2010). But others argue that a mixed method research is a research method that combines or mengabungkan between quantitative and qualitative methods to be used together in a study, in order to obtain more comprehensive data, valid, reliable and objective (Sugiyono, 2012). This type of design using Sequential explanatory study is the first to use quantitative methods and the use of qualitative methods. The first phase, data collection and data analysis with quantitative, then the second stage of data collection and analysis of qualitative data, in order to strengthen the results of quantitative research conducted in the first phase (Creswell, 2009).

RESULTS AND DISCUSSION
Assessment of Academic IAIN Internet Utilization Kendari

Source of data: The Academic IAIN Kendari

It can be concluded that the effectiveness of the use of the Internet to spread information that shows the plan can be achieved. The more plans that can be achieved, the more effective the activity, so that effectiveness can also be interpreted as the level of success that can be achieved from a certain way or businesses in accordance with the planned objectives. Effectiveness indicates success if the results of the activities closer to the target, meaning the higher the effectiveness, with regard to the implementation of all the main tasks, achievement of objectives, timeliness, and the active participation of members and is the link between the objectives and results expressed, and shows the degree of correspondence between the objectives expressed with the results achieved showed greater improvement rise achievement.

CONCLUSION
1. Results of votes on the Internet use of the 100 respondents IAIN Kendari penggunauntuk some application services that are already online between 64% to 88% said very well and good, 11% up to 28% provided enough votes, and 2% to 18% which gives less votes.
2. Difficulties / Obstacles in the implementation of the teaching and learning process by using the Internet in the classroom IAIN Kendari is the Internet network access and the signal is so weak that the implementation for developing a learning is not optimal, this means access to the internet campus facilities can not be used due to an internal technical factors.

3. Achievement in Internet use in publishing information that shows the plan can be achieved is evidenced by the number of college students who choose IAIN Kendari every year increasing numbers who obtained the information from the website IAIN Kendari start of 2011 s / d by 2015 with average growth rates of each year 435 students / year.

4. The need for the information service center by academicians of IAIN Kendari and digital development primarily diperpustakaan IAIN Kendari, should be anticipated as well to the needs of science and research focus is in the library.
